New York, NY

SKILLS React, JavaScript, Ruby, Rails, MongoDB, SQL, Git, Firebase, iOS, HTML5, CSS3, PostgreSQL, Redux, *Google Maps Transit API, NodeJS, AWS*

PROJECTS

Web Hunt | *(React/Redux, Rails 5, SCSS, AWS)*

[live](#) | [github](#)

Inspired by Product Hunt, coders can create and share posts about their favorite tech tools

- Implemented a concurrently updating live preview as you are entering the product information, which shows what your product will look like when it goes live
- Engineered a multi-step form which allows users to upload their favorite coding tools in bite-sized portions
- Incorporated custom vanity URLs based on usernames which users can share on social media that links directly to their public profiles

Morning Dash | *(MERN, Mongoose, React/Redux, NodeJS, Google Maps + Transit + Calendar API)*

[live](#) | [github](#)

A Customizable dashboard that displays today's weather, commute, and calendar in a quick format

- Maximized use of the Google Maps API address autocomplete, which reduced signup time and ensured accuracy
- Led overall direction of the project by arranging a meeting in the morning and afternoon to ensure the team was on the same page and were assigned tasks
- Collaborated using git and GitHub, allowing each team member to work on their features concurrently which enabled us to release an MVP after one week

Tidy Albatross | *(Javascript, Canvas, Firebase Cloud Firestore)*

[live](#) | [github](#)

An 'endless runner' game where users help an Albatross clean a beach

- Built using object-oriented inheritance to abstract similar classes to ensure a clean and maintainable codebase
- Integrated Firebase to display high scores to make a more competitive edge
- Designed game logic by combining current score and trash collected, which makes the game progressively more challenging the longer you play

Siddur Torah Ohr - Chabad | *(Swift, Firebase Analytics)*

[app store](#)

A Jewish Prayer app with over 21K MAU - displays relevant prayers based on location, date and time

- Allows a user to Customize Psalms based on their age by inputting their Hebrew or Gregorian birthday
- Developed a way to insert special paragraphs at the correct place and time by leveraging the date, time, current location and other preferences, allowing the most accurate prayer possible in one tap

EXPERIENCE

Transportation Coordinator

NYC Department of Education – Office of Pupil Transportation

Mar 2016 - Nov 2019

- Designed CRM system for over 250 schools using Microsoft Access Database with queries, reports, and forms customized to the agencies transportation needs, cutting report generation time by more than 75%.

IT, Bookkeeping

Consolidated Packaging Group

Oct 2013 - Nov 2015

- Coordinated with the copywriters, developers and the company president resulting in a successful relaunch of the Company Website with a more modern design

EDUCATION

AppAcademy - 16 week, 1000 hour intensive software development bootcamp

Nov 2019 - Mar 2020

Certified MongoDB Developer - Associate MongoDB – License [125955552](#)

Dec 2018

Rabbinical College of America - BA Religious Studies

Sep 2012 - Jun 2013

Central Yeshiva Tomchei Temimim Lubavitz

Sep 2009 - Jun 2012
